

specification. It has also been amended by inclusion of numeral 369 and a rectangular box, which represents the structure which carries out a means for biasing the clip holder closed. This change introduces no new matter as claim 48 explicitly discloses this feature and it is now explicitly supported in the specification. Figure 23 has been amended to show the V-shaped structures in phantom image which are present in the drawer 376A to provide clearer support for the structures recited in claim 53. A close examination of Figure 23 as originally filed shows that the amendment to Figure 23 is merely clarification of structures already shown in the figure. If the drawing changes are approved, Applicant will implement such changes when formal drawings are provided.
